

Converter Comparison

Backend characteristics

The table below is the fixture's reason for existing: a converter that flattens it into prose has lost the data.

Backend	License	Runtime	Tables	Pages/sec
markdown	MIT	CPU	weak	12.0
docling	MIT	CPU	strong	0.8
pdfplumber	MIT	CPU	good	3.4
pypdf	BSD-3	CPU	none	18.5
pymupdf4llm	AGPL-3.0	CPU	good	11.1
marker	GPL-3.0	GPU	strong	1.9

Figures are illustrative placeholders for structural testing and are not measurements of any real backend.
